

Advanced Certification in Full Stack Web Development - Assignment 01

Problem Statement:

You are working as a React JS developer at ForcastInsights. You are required to leverage your React skills to develop a state-of-the-art Application. This project aims to create a robust, user-friendly web application that delivers real-time information and actionable insights to users.

Tasks to be Performed:

- Build a multi-page application that uses the React Context API to manage application-wide state.
- Allow users to switch between light and dark themes, and persist the selected theme across page navigation.
- Implement the theme-switching functionality using the Context API.
- The page will have some text on the switch of the theme text as well as background color will get changed.
