

Advanced Certification in Full Stack Web Development - Assignment 02

Problem Statement:

You are working as a React JS developer at ForcastInsights. You are required to leverage your React skills to develop a state-of-the-art Application. This project aims to create a robust, user-friendly web application that delivers real-time information and actionable insights to users.

Tasks to be Performed:

- Create a registration form that allows users to sign up for an account.
- Implement form state management using the useState hook.
- Add client-side validation to ensure the user enters valid data (e.g., required fields, email format, password complexity).
- Use regex to valid user input
- Display appropriate error messages to the user when validation fails.
- On successful submit, the user should be redirected to the next page where the user will see all the user data
