

## **Java Fundamentals: Electricity Bill Calculator Assignment - 3**

## Problem Statement:

You are required to develop a Java program to calculate the electricity bill for a household. The program should take the units consumed by the household as input and calculate the corresponding electricity bill based on the predefined tariff rates.

## Requirements:

1. The program should prompt the user to enter the number of units consumed by the household.
2. Take the input for the units consumed from the user.
3. Calculate the electricity bill based on the following tariff rates:

|                         |                 |
|-------------------------|-----------------|
| For the first 100 units | \$2.50 per unit |
| For the next 100 units  | \$3.00 per unit |
| For the units above 200 | \$4.00 per unit |

4. Display the calculated electricity bill as the output.
