

Java Fundamentals: Pattern Printing Assignment - 5

Problem Statement:

You are developing a Java program to create a numeric diamond pattern. The pattern should be centered and symmetric, and the size of the diamond should be determined by user input.

Task To Be Completed:

Write a Java program to print a numeric diamond pattern using integers and the number of rows (height) of the diamond as input.

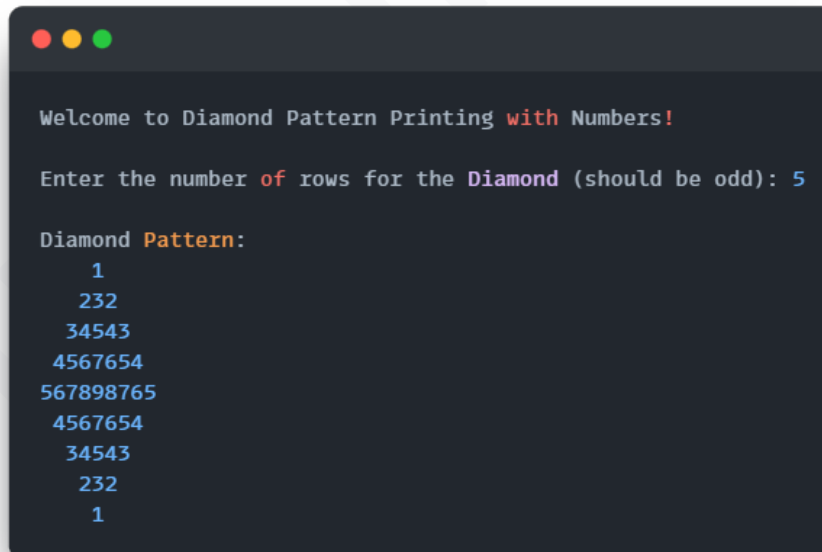

Your task is to implement the Java program to create the numeric diamond pattern as described below:

Input:

An integer n ($1 \leq n \leq 20$) representing the number of rows (height) of the diamond. Make sure the input is Odd.

Output:

Print a numeric diamond pattern with n rows.

```
Welcome to Diamond Pattern Printing with Numbers!

Enter the number of rows for the Diamond (should be odd): 5

Diamond Pattern:
  1
 232
34543
4567654
567898765
4567654
34543
 232
  1
```
