

Java OOPs: Creating Class and Objects Assignment - 1

Problem Statement:

You are tasked with developing a Java program to model a "Car" entity. The Car class should have properties to store information about the make, model, and year of the car. You need to create objects of this class and demonstrate how to set and display the car details.

Class: Car

Properties:

- **make (String)** - Represents the make or manufacturer of the car.
- **model (String)** - Represents the model's name of the car.
- **year (int)** - Represents the manufacturing year of the car.

Task To Be Completed:

Your task is to implement the Car class and a main program that creates multiple car objects, sets their properties, and displays the car details.
