

Java OOPs: Banking System Assignment - 5

Problem Statement:

You have been assigned to develop a Banking System that allows customers to create accounts, perform transactions, and manage their finances. The system should ensure that daily withdrawal limits are honored, and customers can check their account balance and view account information.

Requirements:

1. Create a Bank class to represent the banking system. The Bank class should have methods for the following functionalities:
 - a. Creating a new account for a customer.
 - b. Handling deposit transactions for existing accounts.
 - c. Handling withdrawal transactions while honoring the daily withdrawal limit.
 - d. Displaying the account information for a customer.
2. Create a customer class to represent individual customers. Each customer should have the following attributes:
 - a. Customer ID
 - b. Name
 - c. Address
 - d. Contact Number
 - e. Account Number
 - f. Account Balance
 - g. Daily Withdrawal Limit
3. Ensure that the Bank class can validate and maintain the daily withdrawal limit for each account.
4. Implement a user interface to interact with the Bank class. The user interface should allow users to:
 - a. Create a new account by providing their details.
 - b. Deposit money into their existing account.
 - c. Withdraw money from their account while enforcing the daily withdrawal limit.
 - d. Check their account balance.
 - e. Display their account information, including the remaining daily withdrawal limit.

5. Handle exceptional cases, such as insufficient balance during withdrawals or invalid account numbers.
